

PRECISION AIR COMPLIANCE®

10023 SERIES

CONSISTENCY WHEN & HOW YOU NEED IT

With our 10023 Series Precision Air Compliance®, you'll get flawless results, every time. That's because our system offers constant, regulated pressure on applicators throughout the application process. We feature two air regulators, so you can set the upward and downward pressure, creating precise, repeatable and exact pressure from applicators to your substrate. Our standard unit also features an Applicator Strip function that can be programmed from your robotics or PLC to create a fully automated—and exacting—system. Please note: this system only accepts Designnetics applicators.

APPLICATOR
STRIP

FEATURES:

- Fully Pneumatic Operation
- Constant Pressure to Surface
- Applicator Strip
- Applicator Strip Sensor
- Anti-Rotate, Non-Slip Applicator Adapter
- Maintenance Friendly Design
- No Direct Contact with Fluid

OPTIONS:

- Auxiliary-Mounted Air Regulators
- Three-Inch Extension
- End-of-Arm Mounting Bracket
- Spring Compliance
