

CLEAN AND SIMPLE

The Designetics d3fill® dramatically reduces labor needed to safely fill bottles, while remaining completely splash-free and clean. The environmental, safety, and health benefits—along with the labor and material savings—make the d3fill® an attractive continuous improvement option.

The d3fill® is a closed system used to accurately and safely dispense low viscosity material in Designetics' manufactured bottles. Like all Designetics, Inc. fluid dispense systems, the d3fill® will provide a clean and safe workplace, minimizing noxious fumes, while eliminating the need for funnels and rags used for overflows and spills.

The d3fill® eliminates costly maintenance by preventing harmful chemicals from coming into contact with the equipment's mechanical components. This means more time producing high quality parts and less downtime spent on repair or cleaning.

FEATURES:

- Two Bottle Clamps (Designed to Hold Designetics's 4 and 8 Ounce Bottles Interchangeably)
- Low Level Alarm with Light Indicator
- Recirculation Pump
- Touch-Screen HMI with Proprietary Program
- Minimal Maintenance Required

OPTIONS:

- Alternative Tubing Options
- Bottle Holder
